The New Bioscience Research Building

In the Fall of 2006, the College of Chemical and Life Sciences and the University of Maryland will open the doors to the new Bioscience Research Building. This new facility will become home to modern research facilities with 35 laboratories dedicated to three high-impact areas in biological sciences – host-pathogen interactions, comparative and functional genomics, and sensory neuroscience. In addition, the building has a state-of-the-art 475-seat teaching auditorium and seminar room facilities.

The completion of the Bioscience Research Building this year is another significant milestone that we look forward to celebrating. As the College marks the first full year under its new name and the University of Maryland celebrates the 150th anniversary of its founding, we look to the future. This new facility will open the doors for ground-breaking research by world-class faculty and open an exciting world of possibilities to students.

Fast Facts:

- Groundbreaking ceremony was held on September 14, 2004
- Total of 138,500 square feet
- Independent energy generator and air conditioning redundancy
- Research space for as many as 35 principal investigators
- Total construction cost of $55.8 million
- Additional $5.9 million for capital equipment

We will be offering tours of the Building during the Anniversary Celebration on April 19. **Click here for more information about that event.**
